

Deployment path (conventional RGB camera only)

weights shared: distilled student is what gets deployed

Training only (optional hardware teacher) — not required at deployment

Hatted quantities ( $\hat{S}$ ,  $\text{DoLP\_hat}$ ,  $\text{AoLP\_hat}$ ) are estimates inferred from RGB under stated assumptions — not measurements.

- physics-based (established model; approximations flagged in text)
- learned / estimated (proxy latent variables)
- input / output
- training-only branch
