

RGB (unpolarized)

virtual parallel

virtual crossed

fraction of cartridge pixels with
linear luminance ≥ 0.95 (exposure-matched):

RGB: 0.018

parallel: 0.001

crossed: 0.186

source polarizer at 0 deg,
analyzer at 90 deg.

True latent state (upper bound).

OPEN ISSUE: crossed-state leakage at
oblique incidence depends on the frame
convention linking source and analyzer
zeros; unvalidated until the hardware
experiment (POLARIZATION_PHYSICS.md).
